WOOD RECOVERY INITIATIVE

Save Money & the Environment

reDirect Recycling offer wood recovery solutions for the Frame and Truss industry. We accept waste from applications such as timber roof trusses, wall frames made from hardwood and softwood timbers and floor systems made from raw particleboard, LVL and structural builders glulam.

reDirect Recycling aims to drive change in the Construction and Demolition industry by closing the loop on wasted resources.

Wood waste from participating frame and truss customers is recycled into new particleboard for sustainable business practices.

reDirect Recycling accept offcuts of raw and melamine coated particleboard, clean bluepine softwood and hardwood offcuts, structural builders glulam, LVL, plywood and formwork, enabling efficient recycling opportunities.

We currently offer numerous bin sizes to suit your business, which are placed at your premises and collected on request.

DROP OFF

Bring your wood waste to one of our Material Recovery Facilities:

- 21-25 Dunheved Circuit, St Marys
- 3B Williamson St, Ingleburn

ON SITE BIN

The option of a 15m³, 20m³, 25m³ or 30m³ bin is placed at your premises and collected when full.

By reclaiming materials that would otherwise go to landfill, thereby reducing waste and preserving plantation forests, we protect the environment for future generations.

For more information contact us on **1300 001 306** or visit www.redirectrecycling.com.au

CREATING A COMPLETE & SUSTAINABLE LOOP

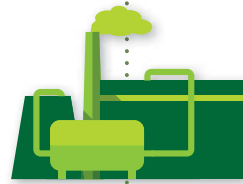

Clean Timber Waste PROCESS FLOW

2 Waste is combined at
the reDirect Recycling
Material Recovery
Facility for processing

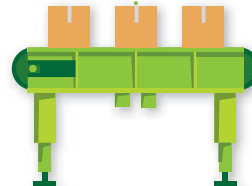

3 Waste is sorted
and processed
efficiently using
machinery

4 Waste material is
extracted and
re-purposed

5 The re-purposed
material is
manufactured
into new and
saleable products
